## Your company's future is written in your data

DNM Technology's Business Intelligence (BI) solutions provide historical, current, and predictive views of business operations, most often using data that has been gathered into a data warehouse, data mart or working directly from multiple operational data sources.

In today's uncertain economic climate, decision makers are under more pressure than ever before to deliver real value. Organisations everywhere are tightening their belts and aiming to lower their spend. At the same time, these organisations are under continual pressure to increase productivity and efficiency.

## How can you save money without compromising productivity and efficiency?

DNM Technology can help solve this problem by utilising your current enterprise infrastructure to provide a Business Intelligence Solutions.

Business Intelligence delivers KPI (Key Performance Indicators) and trend information to the right people, at the right time, within your organisation so that management and staff can make more informed decisions and drive performance.

We have worked with a number of organisations to enable them to get real value from our Business Intelligence Solutions such as:

- **AES**, a subsidiary of Bord Na Mona, used a BI solution that extracted data from each of their waste trucks, in real-time, to monitor the efficiency and effectiveness of their waste delivery system. As a result, AES are able to deliver a cheaper solution with a richer client experience.
- **UOMS**, a subsidiary of ESB, uses a BI solution to monitor their effect on the environment. Their dashboard is able to determine instantly violations of parameters such as water temperature, pH and Thermal Load. They also are able to provide auditors from the EPA with historical data, to the lowest minute.

**To Learn how DNM's Business Intelligence Solution can help your organisation, call DNM today and speak to a member of our BI team.**
