

Virtualisation Assessment

DNM Technology was formed in 2000 by a group of leading IT technology specialists.

It's goal is to become a leading infrastructural services company specialising in:

- Enterprise database solutions from Oracle, Sybase & Microsoft
- Virtualisation technologies from VMware, Xen and Microsoft
- Enterprise system management solutions from Nimsoft, BMC, Bradmark & Quest
- Infrastructure design
- Performance diagnostics and troubleshooting
- Disaster recovery design and implementation
- Enterprise high-available SAN solutions from EMC, Dell, Fujitsu and HP
- Storage & backup solution from Symantec and EMC

Why are you planning to virtualise? What is the measurable benefit of you doing so...?

We at DNM Technology, are firm believers in enabling customers to make decisions based on proven changes in process and demonstrated costs savings delivered by making exactly that decision.

If our customers cannot measure the improvement achieved by making an investment, then how do they meet the objectives of the project. DNM's core skill is bridging the gap between IT and business objectives. This is the fundamental platform we build on to ensure key business stakeholders support during the conception stages of a virtualisation project.

As the world's media and our own news feeds will tell you, virtual technology offers organisations many different benefits. We focus on the key business enabling benefits which include:

- Reducing capital and operational costs by up to 90%
- Transforming operational staff from maintaining existing infrastructure (fire fighting) to innovating new solutions that change the way you supply IT services
- Consolidating and simplifying infrastructure
- Increasing service levels to the business
- Increasing flexibility and the companies ability to respond rapidly to changing business requirements
- Provision of new applications and IT services in minutes not weeks

A DNM virtualisation assessment will:

- Assess your current IT infrastructure
- Deliver a plan to optimise IT resources
- Minimise risk of infrastructure changes
- Develop cost justification for consolidation
